27 November 2006

Dear Mr. Ross:

RE: US Patent Application No.: 10/530.014; PCT No: PCT/CA2003/001514
International Filing Date: 01 October 2003; Priority Date: 01 October 2002;
Attorney's Docket No.: 1491-148

Thank you for your letter of November 9th, which was only received on November 21st. In order to avoid similar delay, I will send this letter by "Priority Post", hoping you would receive it within 48hrs.

I have been advised by independent counsel about the time limit that exists for filing a patent application. I understand that should products incorporating an innovative technology be commercially available in the market for more than 12 months; then said technology/innovation is considered to be public information and could not be patented. This indeed is the case with the captioned technology. Boilers/water heaters incorporating the multiple coil pulsed combustion technology were manufactured and sold in North America more than 12 months prior to the date when patent applications were filed. Therefore, it appears to me that the captioned patent application is invalid.

Based on the above, by this letter, I ask to be placed on record that I do not assume any responsibility or liability should any legal entity, person or company, file a claim against the validity of the captioned patent application.

Yours Sincerely,

M. Movassaghi

Cc: Mr. C. Vermette; Vermette & Co.
